

Residential Mosquito Management

1:00pm – 1:55pm

This session focuses on residential mosquito management with the normal tools that a PMP would have in their toolbox. It encompasses customer communication, property audits, IPM techniques to reduce breeding areas, effective use of larvicides, and finally....utilizing the mist blower in applying adulticides and IGRs.

Many of the techniques of application have been honed from applied research, along with countless Application Workshops held over the Mid-Atlantic during the past 5 years. Hopefully you will walk away with both scientific knowledge and practical information on the management of this pest.

Presented By: Dave McCormick, Syngenta

Dave McCormick is a 1978 graduate from NCSU in Biology and Life Sciences and Agricultural Economics. Dave has spent a total of 38 years as a Pest Management Specialist conducting technical training. The last 43 years he has been a Chemical Industry Representative representing Dow AgroSciences, DuPont, and Syngenta.
